NOVEL ANTIANGIOGENIC PEPTIDE AGENTS AND THEIR THERAPEUTIC AND DIAGNOSTIC USE

ABSTRACT OF THE DISCLOSURE

The current invention concerns novel antiangiogenic peptides which correspond to about 10 to about 150 consecutive amino acids of N-terminal sequences of human growth hormone, human placental lactogen, human growth hormone variant hGH-V, and prolactin, and their use in inhibiting angiogenesis and in the diagnosis of diseases of human pregnancy involving abnormalities of placental vascularization.
